PROFESSIONAL SUMMARY

I build AI products end to end, with evals and cost limits, in Python, TypeScript and Swift. I founded Shelfie, a kitchen inventory app for iOS, now in beta. Before that, five years as a Senior Data Analyst at Reshet 13, an Israeli TV network, building pricing and forecasting models the business acted on.

WORK EXPERIENCE

Shelfie May 2025-present

Founder & Full-Stack AI Engineer · kitchen inventory app for iOS, in beta New York

- Replaced manual entry with a camera walk-through of the kitchen. The user confirms only the items the model is unsure about.
- Recognition runs on the phone first, and only what it can't resolve goes to a cloud vision model. A 30 to 50 item sweep costs one to two cents.
- Every model call goes through one gateway with spending limits, and CI keeps the app from calling providers directly.
- Claude Code agents write much of the code. Safeguards block risky commands, CI runs evals and fails changes that miss accuracy targets or skip tests, and I review every merge.
- Own the whole stack: SwiftUI app, Postgres and TypeScript backend, CI.

Cohort NYC July 2026-present

Director & Chief Growth Officer (volunteer) New York

- Built a pipeline that ties each Luma registration to its link or referral, which the board uses to pick channels. In two months, subscribers grew 61% and attendance 55%.

Career break · relocation to the U.S. and full-time AI/ML retraining, certificates below 2023-2025

Reshet 13 2018-2023

Senior Data Analyst · Python and SQL pipelines, forecasting Tel Aviv

- Replaced weekly manual Excel reporting with Python and SQL pipelines, saving about 70 hours a week. Rolled them out to programming, commercial, promo and C-level teams and to News 13, the channel's separate news company, and mentored four junior analysts through the switch.
- Built a regression pricing model that found underpriced primetime ad slots. The commercial team adopted it in FY2022, when revenue rose 17%.
- Built the main viewership forecasting model, used by leadership for content acquisition and greenlight decisions.

SKILLS

AI engineering: LLM agents and tool use, prompt engineering, evals, RAG, vision and multimodal pipelines, agent guardrails, MCP servers, LLM gateways and cost control, Claude Code

Software: Python, TypeScript, Swift and SwiftUI, React, SQL, Postgres; backend and API design, CI, automated testing, code review of agent-written PRs

Data: regression, forecasting, pricing analysis, A/B testing, data pipelines

Open source (github.com/OrenSegal): rootcause, a Python incident-investigation agent whose evals showed model choice changed cost 25x but not accuracy; sous, litmus, cited and scoped, tools for checking what coding agents and LLMs produce

EDUCATION & CERTIFICATIONS

B.Sc. Information Systems, The Academic College of Tel Aviv-Yaffo 2014-2018

Certifications (2025): Agent Engineering Bootcamp, Break into Data · MLOps & LLMOps Specializations, Duke
