PROFESSIONAL SUMMARY

Applied AI engineer who builds LLM products and measures them with evals and cost controls. Founder of Shelfie, an iOS kitchen app, and author of open-source agent eval tools. Previously five years as a Senior Data Analyst building a national TV network's analytics suite at Reshet 13.

WORK EXPERIENCE

Shelfie 2025-present
Founder and Full-Stack AI Engineer · vision-powered kitchen app for iOS, pre-launch New York

- Built the Swift app and Postgres backend that turn a camera walk-through of the kitchen into a live inventory, which learns from each household's corrections and suggests dinner from what's expiring.
- Kept cloud vision cost per item low by cropping items on the phone and sending up to nine in a single call.
- Routed the app's cloud model calls through one gateway with a semantic cache, a circuit breaker and a daily spend cap, enforced by a CI rule that caught direct Gemini calls in two services.

KashCash 2025-present
Analytics Engineer (part-time) · consumer transactions business Remote

- Built and maintain a daily pipeline: a script loads the ledger's CSV exports into BigQuery and a scheduled query builds monthly sales reporting for a live Looker Studio dashboard. Over a million transactions processed to date.

Career break · U.S. relocation and AI/ML retraining 2023-2025

Reshet 13 2018-2023
Senior Data Analyst · national TV network Tel Aviv

- Saved about 70 work hours a week by replacing Excel reporting with pandas and SQL pipelines, adopted across the network and its news company. Mentored four analysts through the rollout.
- With the commercial team, built a regression model that replaced pricing heuristics and found underpriced prime-time ad slots. In FY2022, its first year live, gross ad revenue finished 17% above FY2021.
- Built the analytics suite used company-wide, from the C-suite to customer-facing teams: the forecasting model behind content acquisition and greenlight decisions, and Power BI audience analytics.

PROJECTS

Open-source agent and eval tools

- **rootcause:** incident-response agent graded on 25 incidents with known causes. Across 525 runs from Haiku to Opus, cost per solved incident varied 25x while pass rates stayed between 77 and 84%.
- In follow-up tests a multi-agent split tripled cost for no measurable gain, and BM25 beat embeddings on recall@5.
- **litmus:** mutation testing for agent evals. Across three plugins, 2 of 6 eval cases still passed with the plugin removed.

Cohort NYC · growth work for a community nonprofit, volunteer, 2026

- Built agents that draft event copy, target its distribution and build core audiences, plus an SQL and Python pipeline tying each Luma registration to its source. Over two months followers grew 61% and average event attendance rose 83%.

SKILLS

AI engineering: agents and tool calling, human-in-the-loop gates, LangGraph, prompt engineering, evals and LLM judges, RAG, MCP, OpenTelemetry, Claude Code plugins
Software: Python, TypeScript, React, Next.js, Swift, SQL on Postgres and pgvector, FastAPI, REST APIs, CI/CD, Docker
Data and ML: data pipelines, BigQuery, regression, forecasting, pandas, scikit-learn, TensorFlow, Looker Studio, Tableau

EDUCATION AND CERTIFICATIONS

B.Sc. Information Systems 2014-2018
The Academic College of Tel Aviv-Yaffo
Certifications: Duke MLOps & LLMOps (Coursera) 2025 · Break Into Data Agent Engineering 2025 · DeepLearning.AI Deep Learning 2024
